# Automated Installer (2009.06)

- Automatic installation of OpenSolaris on x86
- Requires a AI server and DHCP server
- Requires access to IPS repository
- Network boot or modified GRUP menu
- AI manifest file
  - ✓ disk target
  - ✓ ips repository location
  - ✓ packages
- System Configuration manifest
  - ✓ hostname, timezone, root password
- Criteria manifest, install only on given clients
  - ✓ network, MAC address
  - ✓ disk and memory size

# Automated Installer

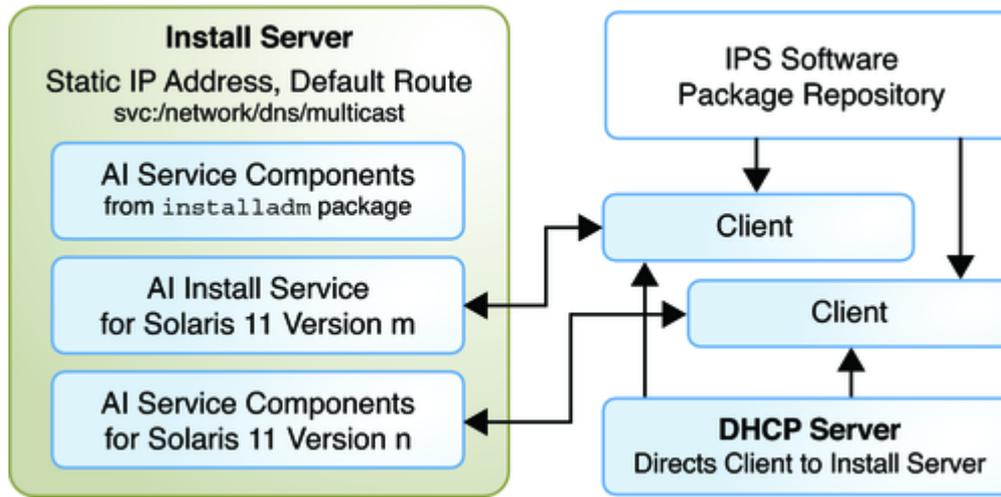

# Automated Installer

"Solaris SIG"

# Automated Installer

# Automated Installer

- ✓ **Installadm ...**
- ✓ **installadm create-service / set-service / delete-service**
  - ✓ **sets up boot image**
- ✓ **installadm create-manifest / update-manifest / delete-manifest**
  - ✓ **install process for client**
- ✓ **installadm create-profile / delete-profile**
  - ✓ **system configuration profile**
- ✓ **installadm list**

# installadm create-service

- ✓ Copies Solaris bootable image to the server
  - ✓ x86 and SPARC
  - ✓ any version
  - ✓ via "ai ISO" image or from IPS
  - ✓ starts tftp services pointing at /etc/netboot
  - ✓ starts DHCP (optional)
  - ✓ manually update your own DHCP server

# installadm create-client

- ✓ Associate a specific client with a services
  - ✓ uses *mac-addr*
  - ✓ creates grub menu
  - ✓ creates boot image
  - ✓ client ready to boot (if DHCP updated)

# installadm create-manifest

- ✓ **Controls the installation of the client**
  - ✓ disk layout / zpool control / iSCSI, etc..
  - ✓ IPS publisher,
  - ✓ software/packages
  - ✓ criteria based on mac-addr, platform, arch, cpu, network, memory, zonename
  - ✓ derived scripts
    - ✓ create manifest at install time
  - ✓ boot control (grub)
  - ✓ ai\_manifest(4)

# Derived Scripts (example)

## ✓ Environment variables

- ✓ /usr/share/auto\_install/derived\_manifest\_test\_env.sh
- ✓ i.e. SI\_DISKNAME\_n, SI\_DISKSIZE\_n, SI\_NUMDISKS
- ✓ SI\_MEMSIZE, etc...

```
# aimanifest get software/source/publisher/origin@name
http://pkg.oracle.com/solaris/release
# aimanifest set software/source/publisher/origin@name
      http://192.168.56.101:9000
# aimanifest get software/source/publisher/origin@name
http://192.168.56.101:9000
```

# installadm create-profile

- ✓ **System Configuration of the client**
  - ✓ **hostname, timezone, keyboard, locale**
  - ✓ **Network (dhcp or static)**
  - ✓ **root and initial users, remove user**
  - ✓ **nameing service, nsswitch**
  - ✓ **criteria again is added**

**# sysconfig create-profile -o myconfig.xml**

**and NOT**

**# sysconfig configure**

# JumpStart to AI

- ✓ Tool to help conversion of jumpstart rules & profiles
  - ✓ `Install/js2ai`
- ✓ Solaris 11 can Jumpstart Solaris 10

# Automated Installer

## ✓ Installing and Configuring Zones

- ✓ after an AI install of the global zone, then on first boot non-global zone are installed

```
<configuration type="zone" name="zone"  
    source="http://server/config/zone.cfg"/>
```

## ✓ Custom Script During First Boot

- ✓ create an IPS package with SMF service

```
<create_default_instance enabled='true' />  
end of script disable service and uninstall
```

- ✓ add package to an IPS repository.
- ✓ install that package during the AI install

# Zones installation

- ✓ Automated Installer does not do non-global zones
  - ✓ manifest and sysconfig files can be used

```
# zonecfg -z zone1 'create; set zonename=zone1; set  
zonepath=/zones/zone1'
```

```
# zoneadm -z zone1 install \  
    -m /fullpathof/zone1_manifest.xml \  
    -c /fullpathof/zone1_sysconfig.xml
```

"Solaris SIG"

# demo

- **The test environment (VirtualBox)**
- **AI Server Software**
- **Local copy of Solaris 11 packages**
- **Modified AI manifest**

# Setup up VirtualBox

- Enable DHCP server on VirtualBox
- Disable Mac OS/Windows firewall
- Create Solaris Client (server)
  - Network 1 = Your normal internet (net0)
  - Network 2 = Host only Adaptor (net1)
  - # ipadm create-ip net1
  - # dladm create-addr -T dhcp net1/v4
    - ✓ should get (192.168.56.101)
- Create Solaris Client (client)
  - Boot off network
    - ✓ Network 1: NAT (mac address: 08:00:27:b6:20:72)
  - MacOS: # mkdir ~/Library/VirtualBox/TFTP
  - Solaris: # mkdir ~/VirtualBox/TFTP
  - Windows: C:> mkdir *YourProfile*/VirtualBox/TFTP
  - VBoxManage modifyvm "client" --nattftpserver1 192.168.56.101
  - VBoxManage modifyvm "client" --nattftpfile1 01080027B62072

# Setup up AI Server

```
# svcadm enable /network/dns/multicast
```

```
# pkg list install/installadm
```

```
NAME (PUBLISHER)                                VERSION
install/installadm                             0.5.11-0.175.0.0.0.2.1482
```

```
# installadm create-service -n sol175x86
```

```
-n Service Name , -s AI-image location or iso (default download it)
```

```
-d imagepath location (default /export/auto_install/ServiceName)
```

```
OK to use default image path: /export/auto_install/sol175x86? [y/N]: y
```

```
Download: install-image/solaris-auto-install ... Done
```

```
Creating service: sol175x86
```

```
Image path: /export/auto_install/sol175x86
```

```
Creating default-i386 alias.
```

```
No local DHCP configuration found. This service is the default
```

```
alias for all PXE clients. If not already in place, the following should be added to the DHCP configuration:
```

```
Boot server IP           : 192.168.56.101
```

```
Boot file               : default-i386/boot/grub/pxegrub
```

```
Please ensure the above 'Boot server IP' is correct.
```

"Solaris SIG"

# Setup up AI Server

```
STATE      STIME  FMRI
online     15:44:36 svc:/network/tftp/udp6:default
online     15:44:53 svc:/system/install/server:default
```

```
# installadm create-client -e 08:00:27:b6:20:72 -n sol175x86
```

No local DHCP configuration found. If not already configured, the following should be added to the DHCP configuration:

```
Boot server IP      : 192.168.56.101
Boot file           : 01080027B62072
```

Note: determined more than one IP address configured for use with AI.  
Please ensure the above 'Boot server IP' is correct.

```
# ls -l /etc/netboot/
```

```
lrwxrwxrwx      .. 01080027B62072 -> ./sol175x86/boot/grub/pxegrub
drwxr-xr-x      .. default-i386
-rw-r--r--      .. menu.lst.01080027B62072
drwxr-xr-x      .. sol175x86
```
